High Performance Diesel System Treatment

DESCRIPTION

Wynn's HIGH PERFORMANCE DIESEL SYSTEM TREATMENT is a chemical treatment composed of detergents and a cerium component that has a triple action:

- 1) Increases engine performance
- 2) Reduces fuel consumption
- 3) Reduces black smoke

PROPERTIES

- Immediately improves combustion, which will:
 - enhance engine performance
 - improve acceleration.
- Reduces fuel consumption.
- Reduces black smoke.
- Cleans and protects diesel injection systems.
- Protects against oxidation and corrosion.
- Lubricates to compensate for low sulphur diesel.
- Prevents deposit formation.
- Does not harm oxidizing catalysts or soot filters of diesel engines.

APPLICATIONS

- Recommended for all diesel engines (new as well as used).

DIRECTIONS

- Add every 5000 km/3100 miles.
- One bottle of 500 ml treats 70 litres diesel fuel.

TECHNICAL DATA

| | |
|--------------------------|---------------------------------|
| Appearance | : clear brown liquid |
| Density at 15°C | : ca. 0,8265 kg/dm ³ |
| Refractive Index at 20°C | : ca. 1,4508 |
| Flash Point | : ca. 45°C |

PACKAGING

W76401 – 12x500 ml – EN/FR/DE/NL/PT/ES/IT/EL/RU
